01 / FIREFLIES.AI PRODUCT MANAGEMENT LAUNCHPAD CAPSTONE

From Meeting Commitments to Honest Closure

Making ownership explicit and resolution honest inside Fireflies Tasks to test whether 14-day closure improves without damaging user trust.

Prepared By

Kirankumar S.

Case-Study Baseline

28% Resolved in 14 Days

6-Month Target (To Validate)

45% Target (+17 pp Goal)

Pilot Owner Confirmation and Explicit Resolution Before Scaling

Core Solution 1: Owner-Confirmed Handoff RECOMMENDED

Separate suggested owners from confirmed owners via explicit accept, decline, or clarify controls. Reassignment stays pending until accepted.

Core Solution 2: Lightweight Explicit Resolution

RECOMMENDED

Support Done, Deliberately Dropped, and Accepted Reassignment as terminal outcomes while keeping Blocked/Waiting non-terminal.

Supporting Capability: Manual Task Creation

Capture missed commitments manually without expanding Fireflies into a standalone project-management tool.

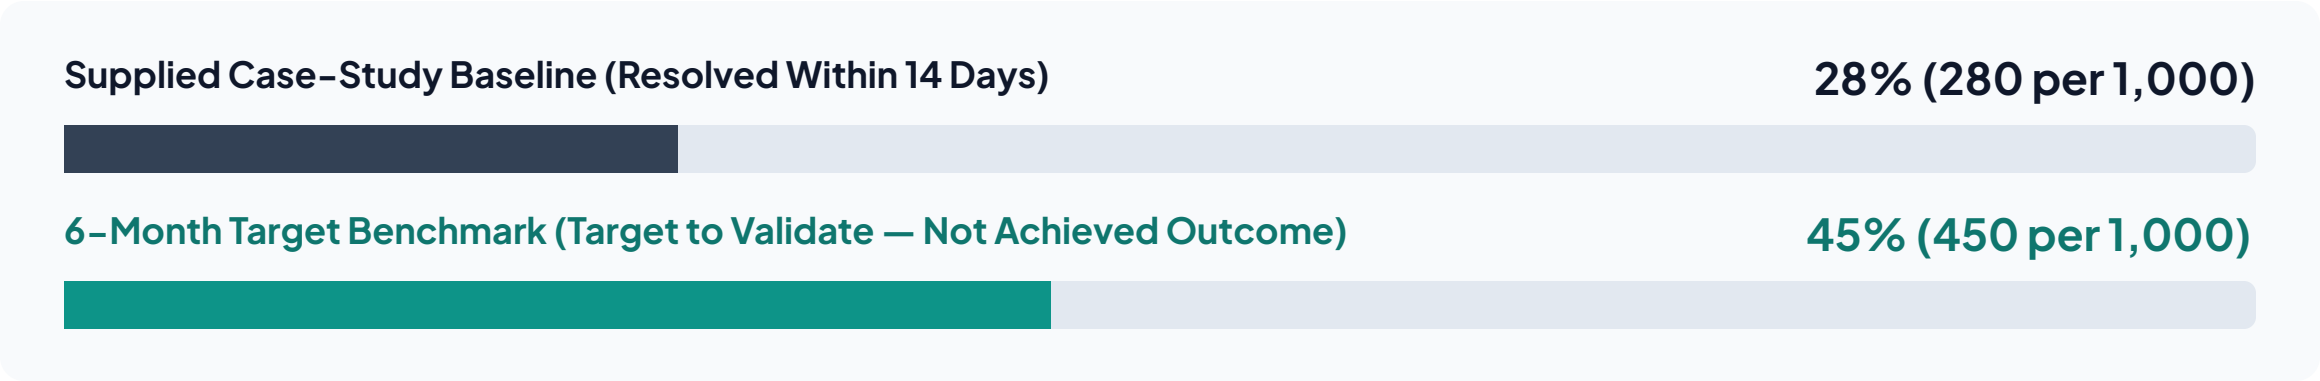

WHY PILOT BEFORE SCALING

Directional Evidence Requires Controlled Validation

- **Root Cause Open:** Interviews show fragmented tracking and delays, but no single dominant cause is proven.
- **Usability Untested:** Technical interaction checks passed, but participant usability tests are still planned.
- **Explicit Ask:** Approve Phase 0 usability validation and Phase 1 instrumented cohort pilot.

03 / BUSINESS OBJECTIVE & TARGET ARITHMETIC

Bridging the 17-Percentage-Point Gap to Honest Closure

280 / 1,000

Baseline qualifying resolutions per 1,000 eligible commitments.

450 / 1,000

Target qualifying resolutions per 1,000 eligible commitments (~60.7% relative lift).

+170 Resolutions (+17 pp)

Target arithmetic illustration only—actual observed product impact is unavailable until piloted.

Strict Closure Semantics Prevent Artificial Metric Inflation

Qualifying Resolutions (Counted)

- **Explicitly Marked Done:** Confirmed owner records completion.
- **Deliberately Dropped:** Explicitly closed when deprioritized or no longer required.
- **Reassigned & Accepted:** Receiving owner explicitly accepts handoff responsibility.

Non-Resolutions (Excluded)

- **Blocked / Waiting Work:** Active dependency halts progress; remains unresolved.
- **Pending Reassignment:** Transfer proposed, but new owner has not accepted.
- **Unconfirmed Ownership or Silence:** Suggested names or stale tasks without action.

Distributed Post-Meeting Tracking and Provisional Sample Boundaries

Participant / Episode	Reported Workflow & Friction Signal	Evidence Boundary
P13 (Business Analysis) & P02 (AI Assurance)	Manual CRM task entry from meeting chat (P13, delayed by SQL data); Jira/Sheets/Excel tracking & slang capture gaps (P02).	Does not prove 14-day non-resolution or quantify capture failure rate.
P05 (DevOps) & P14 (SAP MM Consultant)	Same-day task delayed ~1 wk by requirement mismatch (P05); Smartsheet/Box/MoM tracking delayed by missing UAT data (P14).	Does not trace one formal meeting commitment to a verified terminal state.
P09/P10 & P15 (Data Eng) & P11 (Design Eng)	Snowflake-to-Databricks dependency chased via email to Jira (P09/P10/P15); deadline risk flagged 2-3d early (P11).	P15 flagged as potential duplicate of P09/P10; final closure unconfirmed.
P03, P04, P06, P07, P08, P12 & Oct 30 Record	Shared queues (P04/P07), omitted minutes (P06), KT gaps (P08), RPO volume (P12), offline check-ins/Sheets (Oct 30).	Admin & buyer perspectives remain under-documented in tracker.

Research Integrity Note: P01–P15 are populated in the tracker, but P15 is flagged as potentially duplicating P09/P10. Distinct participant count remains provisional until verified.

Commitments Lose Continuity Between Agreement and Outcome

STEP 2 PROBLEM STATEMENT

For teams that make commitments in meetings, the transition from spoken agreement to an explicitly verified outcome can be difficult to follow across existing tools and handoffs. When the agreed action, willing owner, deadline or completion criteria, and final status are not consistently connected, participants may need manual follow-up and lack a reliable view of whether the commitment was completed, reassigned, or deliberately dropped.

What Evidence Supports DIRECTIONAL

A continuity and verifiability gap across meeting notes, chat, CRM/Jira, and cross-team handoffs.

What Remains Unproven HYPOTHESIS

Research does not quantify failure-mode prevalence or prove unclear ownership is the sole dominant root cause.

07 / COMMITMENT LIFECYCLE ARCHITECTURE

Four-Stage Continuity: Capture → Confirm → Progress → Resolve

1. Capture

AI extracts a candidate phrase with meeting context, or the user adds a manual task.

2. Confirm

The suggested owner accepts, declines, or clarifies the scope. Mention ≠ ownership.

3. Progress

Active work tracks Open, Blocked/Waiting, or Reassignment Pending (all unresolved).

4. Resolve

Explicitly closed via Done, Deliberately Dropped, or Accepted Reassignment.

Prioritizing 12 Candidate Options via Directional RICE Rubric

Candidate Option (Top Shortlist of 12)	Reach	Impact	Conf.	Effort	Index	Disposition
2. Explicit Resolution Controls in Tasks	5	5	4	2	**50.0**	**Core Solution B (includes #8 Drop)**
1. Owner Confirmation Before Assignment	5	5	3	2	**37.5**	**Core Solution A (includes #7 Reassign)**
3. Context Card & 8. Deliberate-Drop Rationale	4 / 3	4 / 4	3 / 4	2 / 2	24.0	Embedded into Core A & B
4. Criteria Clarify (18.0) & 5. Blocker Update (18.0)	4	3	3	2	18.0	Supporting States in MVP
12. Closure Summary (16) · 6. Reminders (12) · 9. Sync (6.4) · 10. Manual (6.0) · 11. Team View (6.0)	3–4	3–4	2–3	2–5	6.0–16.0	#10 Supporting; #6, #9, #11 Deferred

Note: Scores are comparative product judgments (R×I×C÷E on 1–5 scales), not empirical findings from user experiments.

09 / STRATEGIC SELECTION RATIONALE

Why Consent and Honest Controls Beat Nudges and Heavy Sync

Why Core A + B Win

Directly addresses unconfirmed ownership and missing exit states inside Fireflies Tasks with reversible, low-effort UI controls.

Why Not Heavy Sync First

Two-way sync across Jira, CRM, and Smartsheet is high-effort and exports unconfirmed AI guesses into external backlogs.

Why Not Nudges / Dashboards

Repeated reminders cannot fix unaccepted tasks, and individual compliance scorecards trigger surveillance backlash.

10 / END-TO-END USER FLOW WALKTHROUGH

Concrete Scenario: "Send Revised Proposal by Friday"

Step 1 · Capture

Candidate Extracted

Spoken phrase surfaces as Candidate · confirm owner with meeting context.

Step 2 · Handoff

Owner Confirmation

Suggested owner inspects context and clicks Accept (or Decline/Clarify).

Step 3 · Progress

Blocked Dependency

Waiting on pricing sign-off; marked Blocked · unresolved.

Step 4 · Closure

Honest Resolution

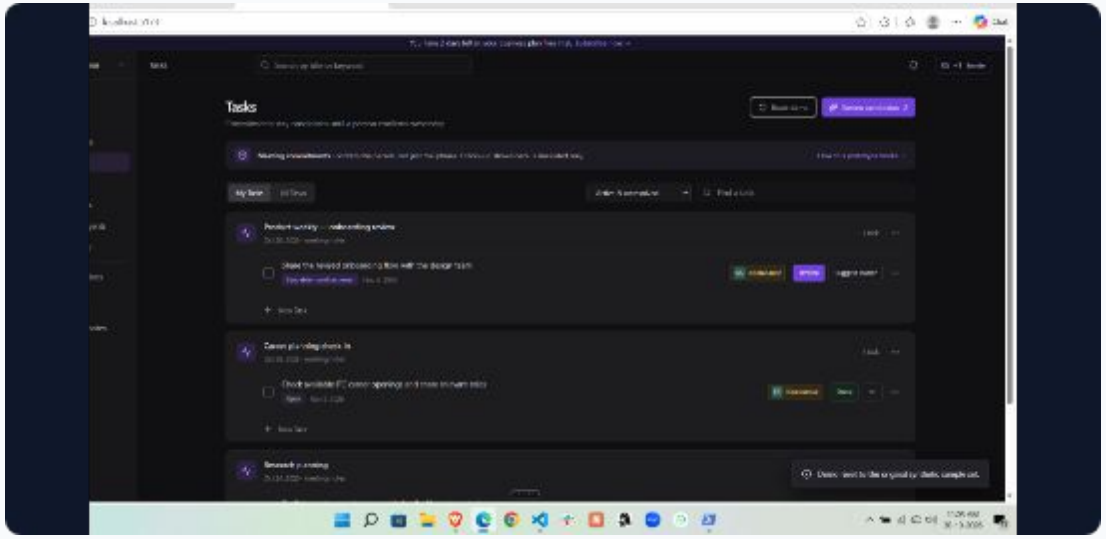

Unblocked once approved; marked Done (or Deliberately dropped).

Reassignment Rule: If the owner reassigns the proposal to Legal, the commitment enters Awaiting acceptance and does not count as resolved until the receiving owner explicitly clicks Accept.

Suggested Owners and Pending Transfers Remain Unresolved Until Accepted

State 1: Candidate & State 4: Pending Reassignment Acceptance

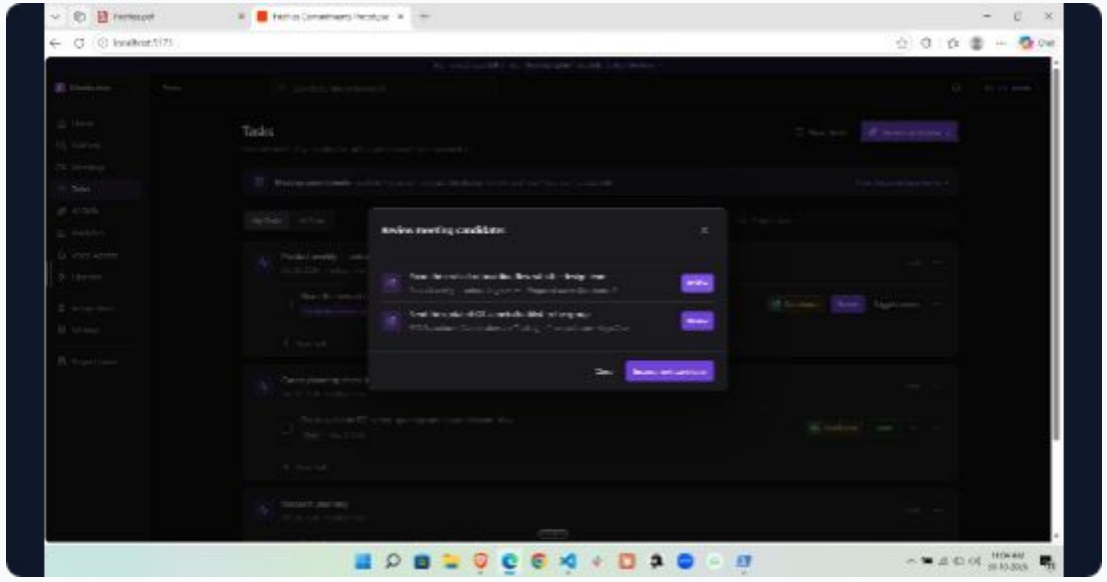

GENUINE PROTOTYPE UI

What it proves: Top row shows Candidate · confirm owner with Review & Suggest owner (unconfirmed ≠ owned). Bottom row shows Awaiting acceptance with explicit Accept / Decline buttons.
What it does not prove: Single-browser simulation; does not prove multi-user backend handoff.

State 1 Modal: Reviewing Extracted Meeting Candidates

GENUINE PROTOTYPE UI

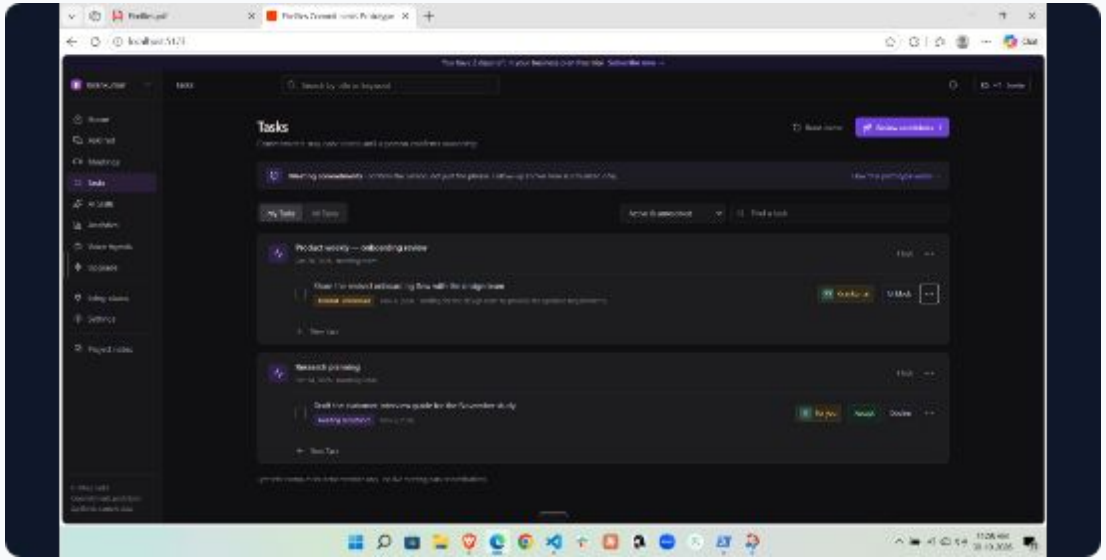

What it proves: Clicking Review candidates 2 opens a dedicated modal listing each candidate's source meeting and proposed owner before entering active Tasks.
Missing Screenshot Placeholder: Reassign owner-picker modal screenshot to be captured if live demo is not used.

Prototype Disclosure: Interactive front-end prototype. Reassignment acceptance is simulated; production backend, authentication, real multi-user synchronization, notifications, and external integrations are not implemented.

Blocked Work Remains Unresolved; Done and Dropped Are Distinct

State 2: Blocked Commitment (Remains Unresolved)

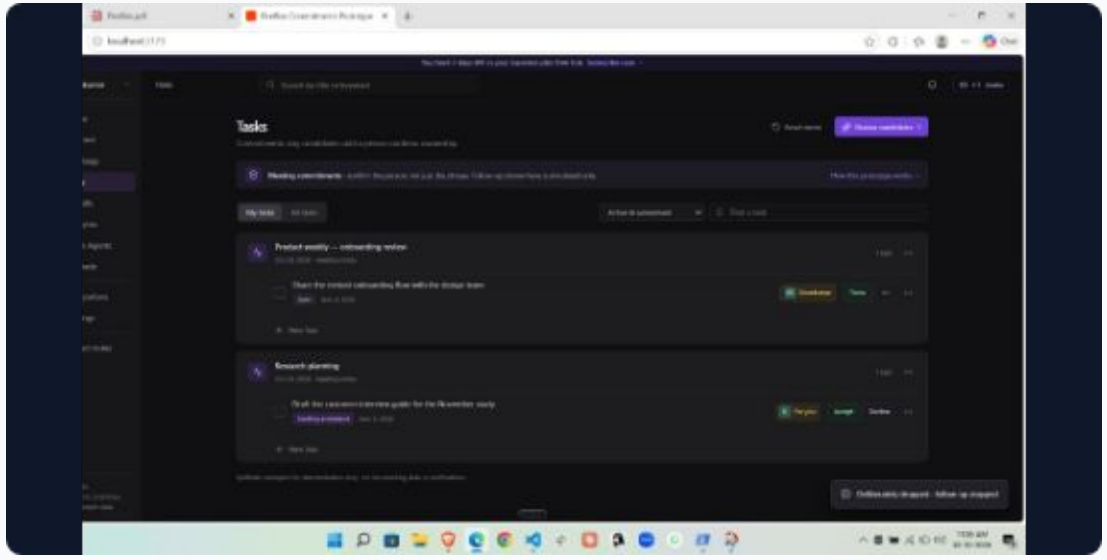

GENUINE PROTOTYPE UI

What it proves: Recording a blocker applies the amber Blocked · unresolved badge, displays the required dependency note (*"Waiting for the design team..."*), and exposes Unblock.
What it does not prove: Does not trigger external dependency tickets or automated reminders.

State 3: Explicit Resolution — Done vs. Deliberately Dropped

GENUINE PROTOTYPE UI

What it proves: Active Open tasks provide an inline Done button, while deprioritized items can be closed via the Deliberately drop modal (Deliberately dropped · follow-up stopped toast).
What it does not prove: Does not prove real-world user comprehension or 14–day resolution lift.

Additional Captured Prototype Screens Available in Package: Mark as blocked modal (11_26_11 AM.jpg), Deliberately drop reason modal (11_26_57 AM.png), Unblocked · returned to open toast (11_25_44 AM.png), and inline action bar (11_26_50 AM.png).

Technical Checks Passed; Participant Usability Testing Is Planned Next

Technical & Interaction Checks

VERIFIED IN PROTOTYPE AUDIT

- Commitment app typecheck & production build passed (1,684 Vite modules) after --configLoader runner Windows config adjustment (SyntaxError not reproduced).
- Tested interactions passed: task creation, required-title validation, ownership confirmation, done, blocked, deliberate drop, simulated reassignment, filters/counts, and 1440px/768px/390px overflow checks with zero console/page errors.

What the Audit Does Not Prove

KNOWN LIMITATIONS

- Single-browser simulated reassignment; no backend persistence, auth, real multi-user identity, live sync, notifications, or external integrations.
- Filter labels (Candidates / Open, blocked, transfer / Resolved outcomes) differ from preferred vocabulary; mobile dialog behavior is untested; and unrelated. SDM errors in separate deck package; **not a usability study.**

Usability Task (Planned)	Proposed Success Condition (Not Achieved Result)	Evidence to Collect	Validation Status
1. Ownership Confirmation	≥80% unaided completion; 0 participants believe a suggested owner has already accepted.	State explanation; accept/decline/clarify path choice.	NOT YET TESTED
2. Blocked Commitment	≥80% record dependency and explain that Blocked/Waiting remains unresolved.	Blocker note entry; comprehension of non-terminal status.	NOT YET TESTED
3. Done vs. Deliberately Dropped	≥80% choose Done for completed work and Dropped for cancelled work without stigma.	Action selection accuracy; participant explanation.	NOT YET TESTED
4. Reassignment Acceptance	≥80% explain that transfer stays unresolved until the receiving owner accepts.	Interpretation of the Awaiting Acceptance Badge.	NOT YET TESTED

Planned Recruitment & Decision Rule: Recruit 5–8 target users (ICs, meeting creators, team leads) before pilot launch; revise UI copy/controls if any task falls below the proposed 80% unaided threshold. No participant usability test has been conducted yet.

14-Day Commitment Resolution Rate, Drivers, and Guardrails

NORTH STAR OUTCOME METRIC (14D CRR)

Eligible commitments explicitly resolved (Done, Deliberately Dropped, or Accepted Reassignment) within 14 calendar days ÷ Total eligible commitments in mature cohort × 100

Leading Drivers

- **Owner Acceptance Rate:** Accepted ÷ responded.
- **Decision Latency:** Median & p90 time to respond.
- **Unconfirmed Share:** Pending at checkpoints.

Workflow & Adoption

- **Resolution Mix:** Done vs. Dropped vs. Reassigned.
- **Blocked Share:** Dependency rate & duration.
- **Repeat Use:** 7d activation & return actions.

Trust Guardrails

- **Honest Closure:** Correction & reopen rate.
- **User Autonomy:** Decline & clarification rate.
- **Alert Burden:** Dismissal & opt-out rate.

Evaluating Mature 14-Day Cohorts Against a Credible Control

Cohort & Comparison Rules PROPOSED

- **Cohort Start:** Timestamp when commitment first becomes a trackable record (14 × 24h window).
- **Mature Cohorts Only:** Include only commitments with full 14-day elapsed window.
- **Source Segmentation:** Report extracted commitments separately from manual tasks initially.
- **Comparison Design:** Randomized team holdout preferred; contemporaneous control if infeasible.

Proposed Dashboard Mockup (Awaiting Pilot Data)

Case-Study Baseline	6M Target (Goal)	Observed Impact
28.0%	45.0%	Unavailable

Metric Integrity Rule: 45% is a target, not a proven forecast. Higher 14D CRR is not identical to more completed work; always report Done, Dropped, and Reassigned shares separately.

Contextual Role Value and Collaborative Utility Hypothesis

Proposed Owner (IC)

Accept, decline, or clarify with transcript context; never silently assigned.

Meeting Creator

See confirmed owners and honest status without manual chasing.

Manager / Lead

Spot blockers and dependency delays early without punitive rankings.

Admin / Buyer

Evaluate aggregate follow-through and workflow trust without backlog bloat.

Causal Chain Hypothesis (No Revenue/ROI Claimed): Contextual exposure → 7-day activation (first explicit confirm/status action) → shared status clarity → repeat usage → higher 14D CRR → potential downstream retention value to validate.

Mitigating Consent, Gaming, Fatigue, and Surveillance Risks

Risk (R1–R12 Summary)	Severity	Design Mitigation	Monitoring Signal
R1. Coerced Ownership & R3. Early Reassign	High	Require explicit accept; keep handoff pending until accepted.	Accept/decline rate; pending share.
R2. Metric Gaming & R12. Misleading Impact	High	Separate Done, Dropped, Reassigned; audit rapid reversals.	Resolution mix; reopen/correction rate.
R4. Notification Fatigue & R5. Surveillance	High	Restrained prompts; personal views; zero employee rankings.	Mute/opt-out rate; IC trust feedback.
R7. Ambiguity & R8. Blocker Blame	High	Allow clarification; keep Blocked/Waiting non-terminal.	Clarification rate; blocked duration.
R6. Tool Split · R9. Friction · R10. Extraction · R11. Privacy	Med–High	Contextual links; inline actions; editable fields; data minimization.	Time to action; edit rate; payload audit.

Deliberate Choices Protecting Trust and Scope Discipline

Trade-Off Tension	Recommended MVP Decision	Accepted Cost / What We Measure
Owner Confirmation vs. Auto-Assign	Require explicit confirmation before ownership is active.	Adds one click; measure time to decision & unconfirmed share.
Strict vs. Broad Closure Counting	Count only Done, Dropped, or Accepted Reassign; keep Blocked open.	Harder to inflate headline rate; preserves metric honesty.
Contextual Links vs. Two-Way Sync	Start with meeting context & links; defer deep Jira/CRM sync.	Some manual external updates remain until pilot validates demand.
Personal Autonomy vs. Manager Views	Prioritize action-oriented personal views & shared blocker context.	No individual compliance rankings; protects IC adoption.

Evidence-Gated Progression From Prototype to Pilot

Phase 0 · Planned Next

Usability Validation

Normalize UI filter labels; run moderated task tests against proposed ≥80% threshold.

Phase 1 · Build & Log

Instrumented Pilot

Lock cohort start & 12-event schema; deploy to limited opt-in cohort.

Phase 2 · Readout

Cohort Evaluation

Compare mature 14d cohorts vs. holdout; audit resolution mix & guardrails.

Phase 3 · Decision Gate

Scale, Iterate, or Stop

Expand only if 14D CRR lifts credibly and trust guardrails hold.

Rollback / Pause Trigger: Pause immediately if users report coerced acceptance, false-closure spikes, or event tracking mismatch.

20 / FINAL RECOMMENDATION & DECISION REQUESTED

Approve Phase 0 Usability Validation and Phase 1 Pilot

The Product Bet

Owner-confirmed handoff + explicit resolution controls inside Fireflies Tasks.

What Remains Unproven

Participant usability pass rates, causal 14-day lift toward 45%, and P15 independence.

Immediate Next Decision

Normalize UI labels, run moderated usability sessions, and lock cohort telemetry.

Prepared by Kirankumar S. · Fireflies.ai Product Management Launchpad Capstone

Reference Specifications and Reconciled Evidence Log

Step 6 Event Schema (12 Core Events)

`commitment_created` · `commitment_exposed` · `commitment_opened` · `owner_confirmation_requested` · `owner_confirmation_responded` · `commitment_status_changed` · `reassignment_requested` · `reassignment_accepted` · `commitment_dropped` · `blocker_recorded` · `manual_task_created` · `commitment_corrected_or_reopened`

Accounting Rule: Fire resolution on reassignment_accepted, never on reassignment_requested or blocker_recorded.

Step 8 Technical Audit & Source Hierarchy

- **Build Fix:** Added --configLoader runner for Windows Vite config read; 1,684 modules built.
- **Workspace Boundary:** Separate fireflies-commitments-deck has unrelated .sdm errors.
- **Primary Sources:** Case Brief + Steps 1–8 Final Reports by Kirankumar S.
